Offering clinically validated radiofrequency (RF)-based energy that addresses skin rejuvenation, wrinkles, fine lines and acne scars with minimal downtime, the Infini™ RF microneedling device from Lutronic Aesthetics (Burlington, Mass.) remains an aesthetic physician's go-to device in a packed marketplace.

Infini's handpiece tip employs an array of gold-coated insulated microneedles that deliver energy to the deep dermis with adjustable depth microneedling, inducing dermal neocollagenesis and elastogenesis.

Infini is good for the patient exhibiting early facial aging who is not ready for a

more invasive procedure, according to Jason N. Pozner, M.D., F.A.C.S., a plastic surgeon in Boca Raton, Fla. "When I first saw the device I thought it was novel technology that would have staying power," he said. "That first impression has been borne out. So many products we work with are attractive at first and then don't go anywhere, but Infini is a good addition to any aesthetic office. The price point is right, I like the ease of adjustability of the settings, the underlying science is solid, and it is my preferred procedure for treating acne scars. It's not a device that sits in a box in the corner. We use it frequently."

As expressed by Steven F. Weiner, M.D., a facial plastic surgeon in Panama City, Fla., "The insulated needles allow for coagulation deeper in the dermis exactly where the collagen is formed. It's great for dealing with those horizontal neckbands and cheek lines, as well as superficial facial lines and wrinkles. I use it to tighten the jawline and the submental area a bit if the patient has some laxity or early jowling. It can treat fat if you go to deeper depths and higher energy levels. I've also used it to treat axillary hyperhidrosis."

Lori M. Hansen, M.D., a facial plastic surgeon in Oklahoma City, Okla., noted, "There certainly are other microneedling devices out there, but you will have a much greater possibility of burning the skin and / or seeing hyperpigmentation. The Infini is safe all around. We love it for addressing acne scars and skin tightening, as well as submental sagging. You can get in close around the nose and eyes. It's not a huge handpiece so you have good maneuverability."

This device is ideal for use in combination with other modalities, Dr. Hansen added. "We have used Infini with chemical peels, CO<sub>2</sub> lasers and more depending on what we are trying to achieve," she said. "On one of my patients, we used the Infini in conjunction with her face-lift and CO<sub>2</sub> resurfacing and the results were simply beautiful."

Return on investment (ROI) is excellent, expressed Dr. Weiner. "Within two to three months it paid for itself. It has been the most profitable device I have ever purchased and I have been purchasing devices for 12 years," he said. "It has brought in \$1 million in revenue and consumable costs are low – under \$100 per patient. Patient satisfaction has been very high, as well."
